# Before installation

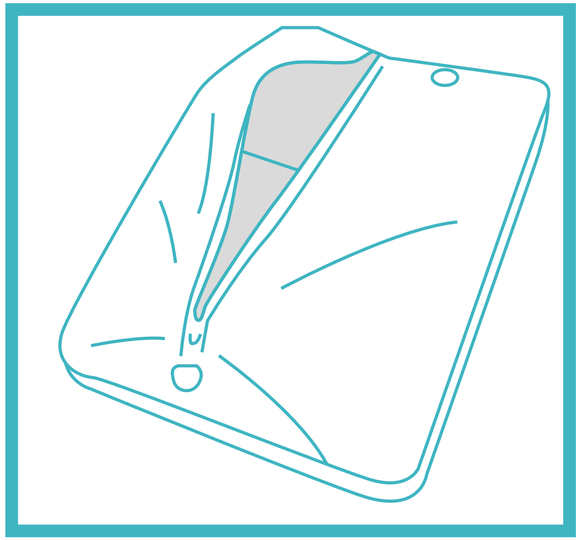

- Read the instruction manual, if you are in any doubt about the instructions or warnings, contact your local dealer.
- Make sure you have received all parts according to the components checklist for installation. If any parts are missing or defective, please contact your local distributor.

- Installation of heavier products may result in instability and possible personal injury.
- The brackets must be assembled as specified in the assembly instructions. Incorrect installation may result in product failure and serious personal injury.
- Proper safety equipment and tools must be used. This product should only be installed by professionals.
- Ensure that the mounting surface can safely support the total weight of the equipment and all its components.
- Use the supplied mounting screws and DO NOT OVERTIGHTEN THEM.
- This product contains small parts that could be a choking hazard if swallowed.
- Keep these products away from children. This product is intended for indoor use only. Outdoor use will not only damage the product but may also cause personal injury.
- Please refer to the product warranty here.

# How to compress

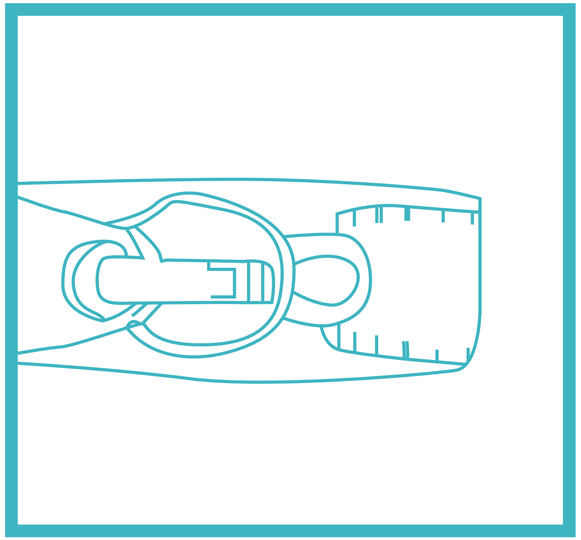

Place the clothes in the airtight bag (it is recommended to put clothes that are easy to compress, such as down jackets and padded clothing, as the compression effect of jeans or clothes that cannot be compressed will not be as noticeable after putting them in).

1

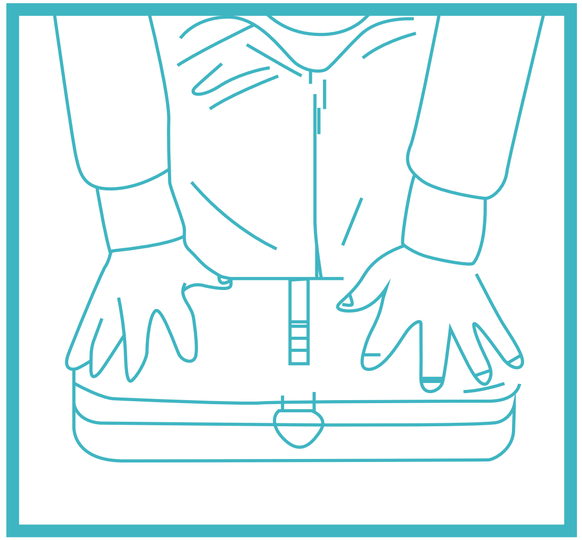

# How to compress

Close the zip (note that the front and end of the zip must be completely closed).

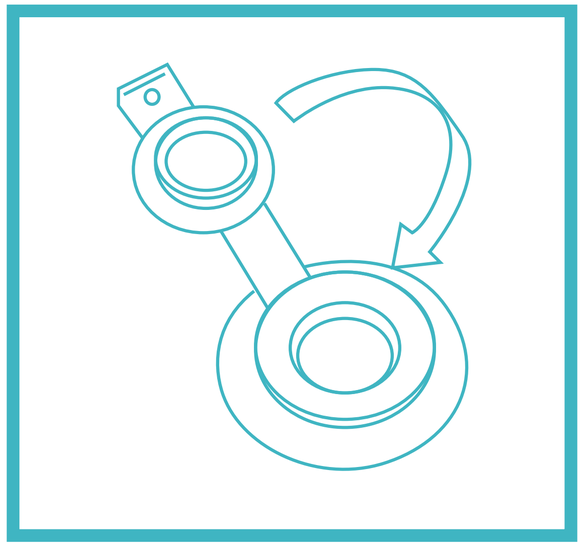

# How to compress

Open the control valve and press the exhaust valve from bottom to top.

# How to compress

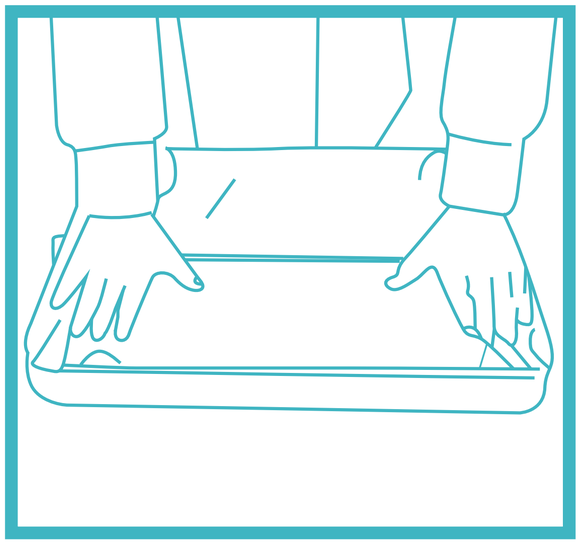

Close the control valve.

4

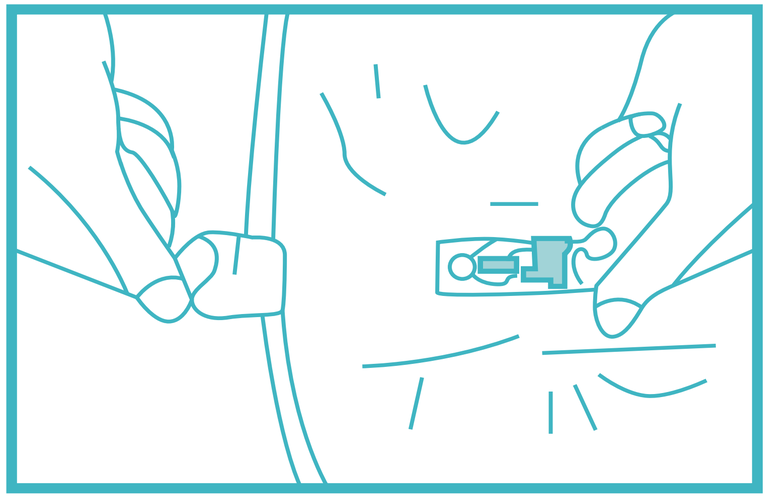

# How to compress

Smooth out the surface, keep the zip flat and prevent lumps from forming.

# How to open

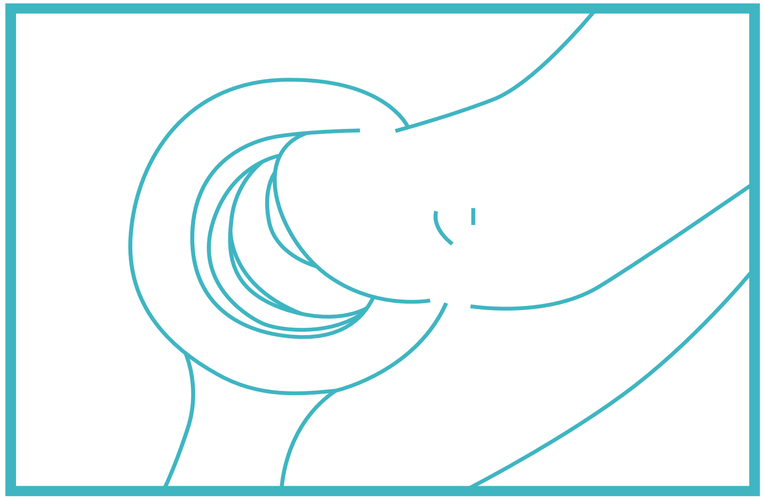

Hold the buckle with one hand and pull on it with the other at the same time to create an opposing force between the two.

EN

# How to open

Important warning: if it is difficult to open the airtight zip after compression, open the one-way valve, gently move the silicone seal inside with your fingers and allow air to enter the bag for 5-10 seconds (taking care not to break the silicone film).

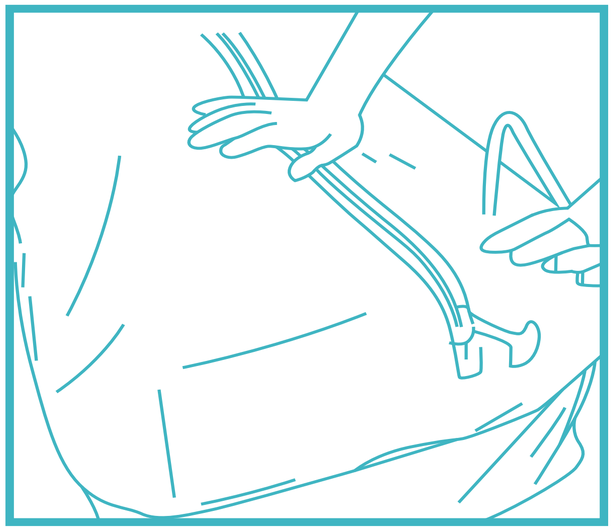

# Reminder

**1.** This bag has an airtight zip, which may require more effort to open or close than a conventional zip. This ensures a better seal.

**2.** To prevent clothes from creasing due to excessive compression, the bag is not completely airtight. If there is free space inside, the bag will slowly expand, helping to reduce creases in the garments.

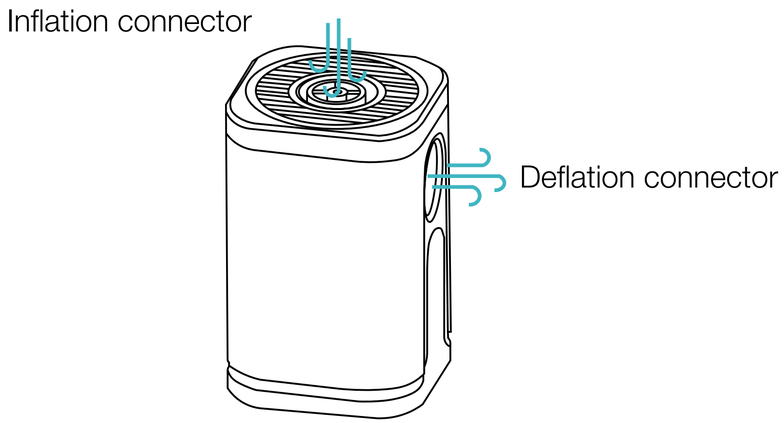

**3.** When using the pump to compress the contents, it is recommended to press the clothes towards the bottom of the bag while pumping. This improves the compression effect and minimises creasing, as shown in the image below.

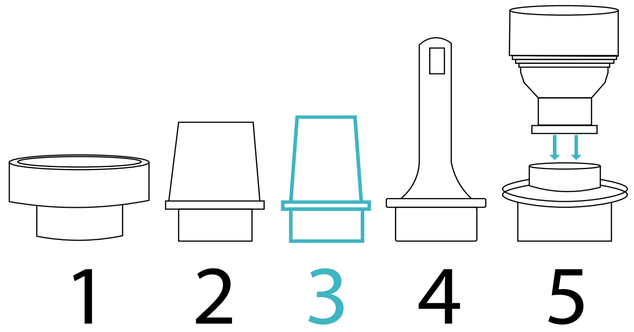

# Connect the nozzle

The air pump included with the TooQ rucksack allows you to remove air from the main compartment, so that clothes and other items take up less space. Follow these steps to use it correctly:

- Connect nozzle number 3 to the top of the pump, to the deflation connector. Connect nozzle number 3 to the rear connector of the pump to inflate.
- Insert the nozzle into the air valve on the rucksack. Ensure that the connection is secure to prevent leaks during the process.
- Press the ON/OFF button twice in succession to turn on the pump. The pump will automatically begin to extract the air. Hold the pump securely while the backpack is being emptied.
- Wait until the compartment is completely empty. The time may vary depending on the volume of air.
- Once deflation is complete, press the ON/OFF button once to turn off the pump. Close the backpack valve to prevent air from re-entering.

# Troubleshooting

If the air pump is not functioning correctly, follow these steps to identify and resolve the issue:

**1. Check the battery status**
If the red light remains on continuously, it means that the battery is low and needs to be recharged. Connect the pump to its charger and wait until the battery is fully charged before using it again.
**2. Restart the device.**
Press the ON/OFF button several times to attempt to restart the pump. Ensure that the button is not stuck or damaged.

**3. Inspect the fan**
Check whether the fan blades are clogged with dust, lint, or other objects. If you detect any obstructions, switch off the pump and carefully remove any items that are impeding movement.

*When the red light is on, it indicates that the battery is below 5% and needs to be charged.
Charging time: 2 hours
Charging voltage: 5v == 1A

# Warranty information

Since 1 January 2022, TooQ offers a 3-year warranty from the time of purchase, so it will always keep the purchase ticket or invoice containing the date of purchase. The distributor or retailer from whom you purchased the product will attend to your claim and offer technical service while the warranty is in force.

**Out of warranty**

The warranty does not cover damage or defects caused to the external enclosure due to:

- Not following the user manual.
- Modifications or alterations of any kind.
- High and low temperatures, humidity or contact with liquids.
- Worn and scratches caused by daily use.
- Use the product with any other device which is not the one indicated for its use. The warranty does not cover damage or defects caused to the hard drive by improper use of the hard drive or the external enclosure.

**FAQ**

You can consult the frequently asked questions from our website www.tooq.com on the product link. Products may be subject to variations due to stock changes, product improvements or printing errors. In case of doubt, please contact us.
